

MK Email Size Limiter

For Lotus Notes

Centrally define and manage powerful email usage, volume and quota policies

With MK ESL your Lotus Notes users know and respect the limits (usage, volume and quota policies) you define centrally.

Different limits can be defined for different users and groups of users.

MK ESL Does not require any Notes template modification.

MK ESL policy controls are performed on the workstations.

MK ESL Take into account the number of email recipients including in groups and nested groups.

MK ESL is managed centrally.

Some of your Lotus Notes users do not always fully understand that certain things they do within Notes, although sometimes technically possible, (but sometimes not), could result in serious technical issues and in significant additional (and sometimes recurring) costs.

With MK ESL, actions like

- Sending very large emails
- Sending not so large emails but to too many users
- Sending emails to thousands of users
- Sending large emails with high priority
- Sending emails (by error or not) to some persons they should not address
- Using a local email database replica to exceed volume quota limitations

Can now be put under the strict control of volume policies.

MK ESL volume policies define (if needed in different terms for different groups of users) what is possible, not advised and forbidden to do in Lotus Notes. Quota policies enable you to centrally manage database quotas for all of the users of your organization using Notes groups.

The MK ESL controls are performed locally (on the workstation). The emails do not need to be sent to the Domino server for policy compliance checking. In case an email does not comply with the policy assigned to a user, MK ESL instantly displays a dialog informing the user (when he/she tries to send or save his/her email) about what is wrong. After this dialog is cleared, the email remains displayed at screen in edit mode, enabling the user to do the changes required to make his/her email compliant with the MK ESL policy.

For each policy parameter two limits can be specified. A first limit that triggers a warning dialog (the user is informed about the fact that the current action can be performed but is close to the policy limit).

A second limit triggering another dialog and preventing the user to send (and even to save, depending on the definition of the policy) his/her email.

All MK ESL dialogs can be fully customized (the dialog texts are parameters of the product).

MK ESL does not require any Notes template modifications.

The immediate benefits provided by MK Email Size Limiter are:

- Reduction of email server storage and network saturation as well as of the Domino server crashes by limiting the maximum size of emails and the maximum size of emails sent to many recipients.
- Full compliance of your Notes organization in adhering to the MK ESL volume policies, with no need for user education.
- Reduction of Administrator and user time spent in resolving large email issues.
- Policies are instantly applied on the workstations. No need for the email to be sent to the Domino server.

MK ESL is an extension to the Lotus Notes Client, versions 5.02b to 8.xx. It is a single DLL file (less than 180 KB), provided in an automatic setup package for instant deployment. It has both an incredibly low memory and resource footprint.

MK Email Size Limiter functioning parameters are managed centrally and updated automatically from one or more central Notes databases, without any end user interaction. The MK Email Size Limiter program itself can benefit of the same update process.

MK ESL is a product of MK Net.Work, the vendor of the global leading ZipMail family of compression solutions. For more information on MK ESL, ZipMail and other Lotus Notes optimization software offered, including fully functional evaluation copies:
