

ZipMail Client v10

For Microsoft Outlook Web Access

Automatic and transparent Zip compression and decompression for Microsoft Outlook Web Access attached files

Each time a user attaches a file in Microsoft Outlook Web Access, ZipMail transparently and automatically compresses this file into a Zip file.

Since attached files are responsible for up to 95% of the messaging traffic (and thus storage), ZipMail will reduce your needs for Microsoft OWA / Exchange related network bandwidth and disk space by 35% to 50% or even more.

ZipMail for OWA supports all OWA versions and all Microsoft Windows versions up to Windows 7 (32-bit and 64-bit versions). There is a single version of ZipMail for Microsoft OWA and a single setup package covering all of these environments.

ZipMail Client v10 for Microsoft Outlook Web Access (OWA) adds transparent Zip attached file compression features to the Microsoft OWA client.

Once ZipMail is installed, the files attached by the users to their Microsoft OWA messages and documents get automatically and transparently compressed into Zip files, saving huge amounts of network bandwidth and disk space.

Zip compression of the attached files occurs automatically and transparently on the client computer, before the files are attached to the messages. There is nothing to install on the OWA servers, and no modifications of the OWA html pages are required. ZipMail for Microsoft OWA is pure client software (an add-in to Internet Explorer).

ZipMail also provides fully integrated automatic and transparent decompression of Microsoft OWA attached Zip files.

ZipMail for OWA is a fully automatic, transparent product that requires no user training.

ZipMail takes only one minute to install (we provide setup packages for automatic installation, no user interaction is needed) and then generates immediate cost savings!

By significantly reducing the size of your email attachments, ZipMail reduces your messaging costs while increasing the performance of your Exchange / OWA servers and networks. ZipMail is one of the fastest, cleanest and easiest ways to reduce the total cost of ownership of your Exchange / OWA messaging system.

More details:

ZipMail benefits from the multi-year experience of MK Net.Work in providing advanced compression solutions for corporate messaging platforms (more than 6 Million ZipMail users worldwide).

There is nothing to install on the OWA server, and no modifications of the OWA html pages are required.

ZipMail for Microsoft Outlook Web Access is pure client software (an add-in to Internet Explorer).

ZipMail for OWA works with any version of Microsoft Outlook Web Access and can be easily configured to compress attached files in virtually any web application or web based email client.

ZipMail for OWA provides the full support of the Zip standard encryption and of the AES (AES 128, AES 192 and AES 256) encryption. ZipMail can be configured to display a password field in the attached file selection dialog of the Microsoft OWA, enabling the users to optionally password-protect and encrypt their compressed Zip files. Password rules can be defined to force the users to enter strong passwords. When opening a Zip encrypted attached file (whatever is its encryption type), the ZipMail transparent decompression feature displays a password dialog. Access to the encrypted Zip file is granted only if the right password is provided by the user.

More than 110 optional parameters are available to make ZipMail for OWA work exactly as you want. These parameters are optional (and hidden to the users). If you are satisfied with the default behavior of ZipMail, you do not have to know anything about them. This extended and very powerful ZipMail option set is the translation of our multi-year experience in email compression software.

ZipMail for OWA is a product of MK Net.Work. For more information on ZipMail, and other email optimization software offered:
